MAJOR AND COMPLEX LOSS DIVISION

Expertise, Service, Quality, Value

Our expertise includes:

- Products/Recall
- Public Liability
- Professional Indemnity
- Property
- Environmental
- Recoveries
- Construction

Major and complex claims require a tailor-made investigation and handling service that can only be delivered as a result of a sustained investment in people and systems. Garwyn has made such an investment for nearly four decades, providing a wealth of investigative experience and unrivalled technical ability to insurers and corporate clients for all classes of liability.

Technical and commercial experience

Expert knowledge is at the heart of the Garwyn Major and Complex Loss Division, with the average relevant experience of Major Loss team members in excess of 15 years. These skills are matched by leading-edge claims management and information systems enabling our Adjusters to focus their time on investigation and analysis for a satisfactory conclusion. This is illustrated by the fact that they deal with a wide diversity of high profile and high value claims, from pollution claims and aircraft crashes to petrochemical incidents and natural disasters, achieving the best possible outcome for our clients.

Proven protocols

Specific, and proven, claims handling protocols have been developed by Garwyn for dealing with major complex losses, which are then tailored to the individual claim. Crucially, the requirements of all interested parties are taken into account in creating these protocols.

Why choose the Garwyn Major and Complex Loss Division?

- Providing the right combination of technically qualified Loss Adjusters and sound commercial experience to investigate major and complex incidents
- Extensive geographical capability, covering Great Britain and Ireland as well as the facility to handle claims and investigations in Europe and beyond
- 24/7 response guaranteed for all classes of liability
- Complete commercial awareness throughout the lifecycle of the claim
- Leading-edge administrative and data control systems, tailored to the specific requirements of a major or complex loss
